PROFESSIONAL SUMMARY

Senior backend engineer with 9+ years of experience building Java and Spring Boot systems across government, healthcare, education, and enterprise domains. Combines hands-on engineering with technical leadership across service boundaries, API design, data integrity, performance, and release quality. Contributed to a microservices platform of nearly 25 services that supports about 50,000 users and handles approximately 100,000 daily requests during election periods. Uses OpenAI Codex and Claude for agentic coding alongside backend engineering work.

SELECTED IMPACT

- Led backend planning, task allocation, implementation guidance, and code reviews within a 30-person development team, while remaining hands-on in delivery.
- Designed service interactions and REST API contracts across an election platform comprising nearly 25 running services; helped deliver an internal platform reported to support 50,000 users.
- Implemented application-level routing of selected search reads to PostgreSQL read replicas, improving responsiveness and reducing load on the primary database.
- Configured SonarQube quality gates and Trivy dependency scanning in CI/CD; supported 15 production deployments in the three months preceding elections.
- Reduced exam-management system response time by 30% through Redis caching and backend performance improvements.

TECHNICAL APPROACH

- Translate product requirements into service boundaries, REST API contracts, data models, and rollout steps across dependent services.
- Balance delivery needs with long-term maintainability through design discussions, code review, workflow validation, access controls, and measured performance work.

TECHNICAL SKILLS

- Backend & Architecture: Java, Spring Boot, Hibernate, REST APIs, microservices, distributed systems, RabbitMQ, API design
- Data & Performance: PostgreSQL, SQL Server, Redis, relational data modeling, query optimization, read replicas
- Security & Quality: Keycloak, JWT token introspection, role-based authorization, workflow validation, SonarQube, Trivy
- Delivery & Operations: Docker, Kubernetes deployment support, Nginx, GitHub Actions, Jenkins, CI/CD, Locust, production troubleshooting
- Technical Leadership: System design, cross-service collaboration, planning, code review, mentoring, stakeholder communication, AI-assisted agentic coding (Codex, Claude)

PROFESSIONAL EXPERIENCE

Penta Global Ltd. — Senior Software Engineer

Dhaka, Bangladesh | August 2023 – Present

- Lead backend engineering activities for an Election Management System, including task allocation, grooming, planning, implementation guidance, and code reviews within a 30-person development team.
- Design service interactions and REST API contracts across nearly 25 services. Own a reporting service that composes data from multiple services to generate official nomination, candidate, schedule, and result reports.
- Contribute to delivery of an internal platform reported to support 50,000 users and approximately 100,000 daily requests during election periods; coordinate integrations across SMS, payment, identity verification, master data, and reporting workflows.
- Implemented application-level routing of center and polling-personnel search reads to PostgreSQL read replicas, improving search responsiveness and reducing primary database load.
- Configured SonarQube quality gates and Trivy dependency-vulnerability scanning in CI/CD, helping identify and remediate critical and high-severity dependency vulnerabilities before release.
- Contributed to approximately 30 deployments through Dockerfiles and deployment troubleshooting in a self-managed Kubernetes environment; supported 15 production deployments during the three months preceding elections.
- Digitized result-center, voter, candidate, and percentage-calculation workflows for approximately 300 returning officers, strengthening validation and role-based controls.

Dynamic Solution Innovators Ltd. — Software Engineer

Dhaka, Bangladesh | January 2022 – July 2023

- Led backend development of a Java, Spring Boot, and PostgreSQL exam-management system; analyzed requirements and designed its database schema.
- Reduced system response time by 30% through Redis caching and backend performance improvements; used Locust for load testing.
- Built a real-time administrator dashboard and used Jenkins for CI/CD.
- Delivered a production system used by 2,500+ administrators, 1,000 invigilators, and 1,000 examinees; supported registration and payment management for nearly 30,000 students.

Dohatec New Media — Java Software Engineer

Dhaka, Bangladesh | October 2016 – December 2021

- Implemented features and resolved defects for the National Electronic Government Procurement System, contributing to enterprise workflows, relational data modeling, large-file uploads, and data privacy and integrity.

Jaliks Soft IT Limited — .NET Developer

Khulna, Bangladesh | February 2016 – June 2016

- Implemented features and maintained SQL Server data components for a large-scale education application using ASP.NET and C#.

PERSONAL PROJECTS

- Open-Care: Lead contributor to an open-source healthcare information platform; built a documented Spring Boot REST API with PostgreSQL, Redis, Keycloak authorization, MinIO, Liquibase, and Docker.
- FactLens: Built and deployed a full-stack editorial platform using Next.js, Strapi, PostgreSQL, and Cloudflare file storage.

EDUCATION

Khulna University | Bachelor of Science (B.Sc.) in Computer Science and Engineering | 2011–2016
