Sadman Sobhan

Senior Software Engineer | Backend & Distributed Systems | Building
Scalable Health & Public-Impact Platforms
Dhaka, Bangladesh

Summary

I am a Senior Software Engineer with over 9 years of experience designing and building secure, scalable backend systems across healthcare, government, education, and enterprise domains.

My core expertise lies in Java, Spring Boot, and backend architecture, with hands-on experience in distributed systems, API design, database modeling, and performance optimization. I've worked on platforms used by thousands of users, where reliability, data integrity, and security were non-negotiable.

Over the years, I've led and mentored engineering teams, contributed to system design decisions, and taken ownership of end-to-end product development — from requirement analysis and architecture to deployment and long-term maintenance.

Beyond day-to-day engineering, I have a strong interest in system design, DevOps, SRE practices, and cloud-native architectures. I enjoy thinking in terms of systems, trade-offs, and long-term scalability rather than just features.

Currently, I am expanding my expertise in DevOps and distributed systems while working on a health-tech platform aimed at improving how patients, doctors, and organizations connect in Bangladesh.

I'm driven by building technology that solves real-world problems at scale and continuously growing toward a future role as a software architect and ecosystem builder.

Experience

Penta Global Ltd.
Sr. Software Engineer
August 2023 - Present (3 years)

Dhaka, Bangladesh

At Pentaglobal, I work as a Senior Software Engineer, primarily focusing on backend development and system design. My role involves:

- Leading and mentoring teams across multiple projects through grooming, planning, and code reviews.
- Designing and implementing secure, scalable, and high-performance systems using Java, Spring Boot, Hibernate, and REST APIs.
- Managing authentication and authorization with Keycloak and optimizing performance with caching solutions.
- Collaborating with cross-functional teams to deliver features aligned with client requirements and business goals.

This role has strengthened my expertise in distributed systems, API development, system architecture, and team leadership while allowing me to deliver impactful software solutions.

Dynamic Solution Innovators Ltd.

Software Engineer

January 2022 - July 2023 (1 year 7 months)

Dhaka, Bangladesh

- Led the development of an exam management system using Java, Postgres, Spring Boot, Flutter and Crystal Report.
- Analyzed requirements and designed the database schema for the system, resulting in an efficient and scalable solution.
- Developed a real-time dashboard for administrators, which improved data visibility and decision-making, resulting in a 40% increase in system usage and overall user satisfaction.
- Increased system efficiency by implementing caching techniques using Redis, resulting in a 30% reduction in system response time and improved user experience.
- Successfully deployed the system, which is now used by over 2500 administrators, 1000 exam invigilators, and 1000 examinees.
- Registered and managed the online payments of almost 30,000 students, which resulted in a more streamlined and efficient process.

Dohatec New Media

Java Software Engineer

October 2016 - December 2021 (5 years 3 months)

43, Purana Paltan Line, Dhaka-1000, Bangladesh

Established long-term and enduring international partnerships with government and non-government organizations along with enterprise solutions. Exhibit expertise in the agile development of an electronic government procurement with effective features for uploading big files, organizing, and modeling data in relational databases, managing FAIR and TRUST principles, and extending products beyond the cloud.

- Performed as software engineer role for National Electronic Government Procurement System for fixing bugs, implementing features, and analyzing client's requirements ensuring data privacy and integrity.
- Directed iterative, agile, and incremental software engineering practices and triggered 80% increase in user engagement in the last six months along with collaborating closely with stakeholders, customers, and product team.

Jaliks Soft IT Limited

.NET Developer

February 2016 - June 2016 (5 months)

Khulna

As a .NET Developer, I successfully implemented key features and resolved bugs in a large-scale education application, working collaboratively with a team of developers and stakeholders. During my time in this role, I gained extensive experience in the ASP.NET framework and C# programming language, applying my knowledge to deliver high-quality solutions and ensure system stability.

- Implemented new features and resolved bugs in a large education application using the ASP.NET framework and C# language.
- Developed and maintained SQL Server databases, including writing stored procedures, triggers, and views.
- Collaborated with cross-functional teams, including product managers, designers, and other developers, to ensure successful project delivery.
- Conducted thorough code reviews and provided constructive feedback to team members to ensure code quality and maintainability.

Pranon

Student Intern

June 2014 - September 2014 (4 months)

Khulna, Bangladesh

Worked as WordPress developer few months. Implemented features and fixed bugs in the large education application.

- gained experience in WordPress CMS and PHP language.
- developed basic frontend technology.

Education

Khulna University

Bachelor of Science (BSc), Computer Science and Engineering · (2011 - 2016)

Shaheed Mashiur Rahman Degree College

Higher Secondary School Certificate, Science · (2008 - 2010)

Jhikargacha M. L. High School

Secondary School Certificate, Science · (2003 - 2008)
